

Our project has limitations. One of these is that the database system is not secure and can be altered by someone we do not know. It also has some bugs that we do not know how to fix. Additionally, it may not have the best UI, which may discourage some users.

Python libraries are also something I have learned about. Without Python libraries, this project wouldn't even be possible. Examples of these libraries are Tkinter, a library that lets Python open a window, and the OS library, which lets Python access files and information about the user's computer. These libraries make up the backbone of our program, as without them, our program wouldn't have had a UI, and errors would have appeared while running back-end processes.

I have learned that teamwork is very important in group projects. Teamwork is the foundation of all projects, as without it, this project couldn't have progressed smoothly. I have also learned valuable lessons such as productivity. Both of these lessons are related to excellence, a value we have upheld throughout most of our project.
